

TransMedics Reports Inducement Grants Under NASDAQ Listing Rule 5635(c)(4)

August 9, 2021

ANDOVER, Mass., Aug. 9, 2021 /PRNewswire/ -- TransMedics Group, Inc. ("TransMedics") (Nasdaq: TMDX), a medical technology company that is transforming organ transplant therapy for patients with end-stage lung, heart, and liver failure, today announced that on August 4, 2021, TransMedics granted non-qualified stock options to purchase an aggregate of 160,800 shares of its common stock to five employees as a material inducement for each employee's entry into employment with TransMedics. The options were approved by the TransMedics Board of Directors and were granted in accordance with Nasdaq Listing Rule 5635(c)(4) and pursuant to the TransMedics Group, Inc. Inducement Plan.

Bringing new life to organ transplant

TransMedics granted a non-qualified stock option to Rakesh Godhani, Chief Digital Officer, to purchase 140,000 shares of TransMedics' common stock and granted non-qualified stock options to four new non-executive employees to purchase 20,800 shares of TransMedics' common stock in the aggregate. The stock options were granted with a per share exercise price of \$27.87, the closing price of the common stock on the Nasdaq Global Market on the date of grant. Twenty-five percent of the shares subject to each option will vest on the first yearly anniversary of the date of the employee's start of employment, with the remainder vesting in equal monthly installments over the subsequent three year period, subject to the employee's continued service with the Company through the applicable vesting date. The options have a 10-year term and are subject to the terms of the TransMedics Group, Inc. Inducement Plan.

About TransMedics Group, Inc.

TransMedics is the world's leader in portable extracorporeal warm perfusion and assessment of donor organs for transplantation. Headquartered in Andover, Massachusetts, the company was founded to address the unmet need for more and better organs for transplantation and has developed technologies to preserve organ quality, assess organ viability prior to transplant, and potentially increase the utilization of donor organs for the treatment of end-stage heart, lung, and liver failure.
